

## **Chalk Spray**

What a better way to get creative outside in this glorious weather

### ***You will need:***

Spray bottles 2/3

Corn starch

Baking soda

Food colouring

### ***Instructions:***

Fill the spray bottles 1/3 of the way with baking soda and corn starch mixture, using roughly equal amounts of both ingredients.

Add a few drops of food colouring, then fill bottles with warm water, leaving a little space at top of bottle.

Use a butter knife or something similar, stir the mixture, then add the tops of the spray bottles and shake very well.

Shake bottles again before you spray.

Only use outside and have fun making your own designs. This is also a great way to use muscles in your hand by squeezing the spray bottle.
